# Course Outline

## 1. Introduction

- Overview of Laiye RPA
- Introduce the key features
  - How to help automate tasks
  - Increase productivity
  - Reduce errors

## 2. Installing Laiye RPA & Setting up the Environment

- How to install Laiye RPA
- How to set up the development environment
  - Connecting to databases, applications, and other systems

## 3. Creating new projects & Connecting to Applications

- How to create a new project in Laiye RPA
- Methods to connect to the applications and systems
  - Necessary configurations
  - Security settings

## 4. Create Automation Workflows by Visual Drag-and-drop interface

- Adding steps
- Configuring inputs & outputs
- Adding error handling & control flow

## 5. Adding Conditions & Controlling Flow

- Statements & loops
  - Control the flow of the automation process

## 6. Managing the Automation Workflow

- Monitoring running tasks
- Checking logs & reports
- Debugging errors & exceptions

## 7. Optimising Performance of Automation

- By configuring the scheduling & resource allocation settings
- Using best practices for coding & testing

## 8. Enhance Automation

- Artificial intelligence
- Machine learning algorithms
  - OCR to read data from documents
  - Predictive models to make decisions

## 9. Integrate with other systems & applications

- Integrating Laiye ARP
  - Using APIs & web services
    - Extend the functionality of the automation workflows
    - Streamline the business processes
